Values, Immediate and Contributory, and Their Interrelation

By MAURICE PICARD, Ph.D.

Lecturer in Philosophy in Barnard College

This book discusses in a fresh, empirical, and concrete manner, two great classes of values. Its premises are grounded on biological and psychological data rather than in transcendental and metaphysical presuppositions. The origin, development, and co-existence of values, are successively treated. There is an interesting discussion of the possible value of false judgments. Altogether, the book lays a solid foundation for research in several new fields of philosophical investigation.

The Ground and Goal of Human Life

By CHARLES GRAY SHAW, Ph.D.

Professor of Philosophy in New York University

Of this book, the New York Evening Post says:

"Many readers will be ready to take up the gauntlet which Professor Shaw throws down as a challenge to most current ideals and preconceptions. But the call to battle is itself stimulating. And Professor Shaw's presentation of his case is far from shallow and unconsidered—and has the inestimable merit of making no concessions to prejudices, of being absolutely unafraid. As side-lights on his main thesis, he throws off some flashing bits of literary criticism; the startling appearance of Milton as a precursor of Nietzche and Strindberg is particularly noteworthy. Moreover, it is a positive and too rare joy to find a book with exact footnote references, and one so richly endowed with knowledge of the history of thought and literature."
